CL-1002 Programming Fundamentals Lab # 14

Objectives:

Practice and understanding on basic c++ programs

Note: Carefully read the following instructions (*Each instruction contains a weightage*)

- 1. There must be a block of comments at start of every question's code by students; the block should contain brief description about functionality of code.
- 2. Comment on every function about its functionality.
- 3. Use understandable name of variables.
- 4. Proper indentation of code is essential.
- 5. Write a C++ statement(s) for each of the following task one after the other, in the same order.
- 6. Make a Microsoft Word file and paste all of your C++ code with all possible screenshots of **every** task output in MS word and submit .cpp file with word file.
- 7. Make separate .cpp files for all tasks and use this format 23F-1234_Task1.cpp.
- 8. First think about statement problems and then write/draw your logic on copy.
- 9. After copy pencil work, code the problem statement on MS Studio C++ compiler.
- 10. At the end when you done your tasks, attached C++ created files in MS word file and make your submission on Google classroom. (Make sure your submission is completed).
- 11. Please submit your word file in this format 23F-1234 L1.docx
- 12. Do not submit your assignment after the deadline.
- 13.Do not copy code from any source otherwise you will be penalized with negative marks.

Problem: 1 |

Jason, Samantha, Ravi, Sheila, and Ankit are preparing for an upcoming marathon. Each day of the week, they run a certain number of miles and write them into a notebook. At the end of the week, they would like to know the number of miles run each day, the total miles for the week, and average miles run each day. Write a program to help them analyze their data. Your program must contain parallel arrays: an array to store the names of the runners and a two-dimensional array of five rows and seven columns to store the number of miles run by each runner each day. Furthermore, your program must contain

- 1. Read and store the runners' names
- 2. Initialize and store the numbers of miles run each day.
- 3. Find the total miles run by each runner and the average number of miles run each day.
- 4. Output the results: runnerName: milesDay1 milesDay2 milesDay3 milesDay4 milesDay5 milesDay6 milesDay7

Problem: 2 | 2d Array

Write a program that can be used to assign seats for a commercial airplane. The airplane has 13 rows, with six seats in each row. Rows 1 and 2 are first class, rows 3 through 7 are business class, and rows 8 through 13 are economy class. Your program must prompt the user to enter the following information:

- 1. Ticket type (first class, business class, or economy class)
- 2. Desired seat

Output the seating plan in the following form:

	A	В	C	D	E	F
Row 1	*	*	X	*	X	Х
Row 2	*	X	*	X	*	X
Row 3	*	*	X	X	*	X
Row 4	X	*	X	*	X	X
Row 5	*	x	*	x	*	*
Row 6	*	x	*	*	*	X
Row 7	X	*	*	*	X	X
Row 8	*	X	*	X	X	*
Row 9	X	*	X	X	*	X
Row 10	*	X	*	X	X	X
Row 11	*	*	X	*	X	*
Row 12	*	*	X	X	*	X
Row 13	*	*	*	*	x	*

Here, * indicates that the seat is available; X indicates that the seat is occupied. Make this a menudriven program; show the user's choices and allow the user to make the appropriate choices.

Problem: 3 | C string

Given the declaration:

char str1[21];

char str2[21];

- a. Write a C++ statement that stores "Sunny Day" in str1.
- b. Write a C++ statement that stores the length of str1 into the int variable length.
- c. Write a C++ statement that copies the value of name into str2.
- d. Write C++ code that outputs str1 if str1 is less than or equal to str2, and otherwise outputs str2

Problem: 4 | C string

Write a program that prompts the user to input a character array and outputs the uppercase letters. (Use a character array to store the string.)

Problem: 5 | C string

Write a C++ Program to Swap Two String using Third variable.

Problem: 6 | C string

Write a C++ Program to Reverse an Array of Strings.

Problem: 7 | C string

Write a C++ Program to check whether a String is Palindrome or not.

Problem: 8 | C string

Write a C++ Program to input a string and then find the number of vowels in that string.

Problem: 9 | 2d array

Write a program which input a 2-Dimensional array of size 5x5, find the largest element in it

Problem: 10 | 2d Array

Write a C++ Program to Find if an Array is a Square Matrix and Print the Diagonals.

The program takes an array and checks if it is a square matrix and prints the diagonals. A

Of Computer & Emerging Sciences Faisalabad - Chiniot Campus

square matrix is one which has equal number of row and columns.

Problem: 11 | 2d Array

Write a C++ Program to Find the Transpose of a Matrix.

The program takes a matrix and prints the transpose of the matrix. In a transpose matrix, rows become columns and vice versa.

Problem: 12 | 2d Array

Write a C++ Program to Perform Matrix Multiplication.

- 1. The program takes two matrices and multiplies them
- 2. If number of columns of matrix A is not equal to number of rows of matrix B, then matrices cannot be added.
- 3. The program is exited.
- 4. Else they are multiplied and the result is printed.
- 5. Exit.
